Optical investigation of Balakhan and Surakhan crude oils. I. S. Sattar-Zade. *Izvest. Akad. Nauk Azerbaidzhan. SSR* 1954, No. 7; *Referat. Zhur., Khim.* 1954, No. 38595.—The optical activity of the fractions of heavy Balakhan (I) and Surakhan (II) crude oil obtained by vacuum distn. at 1.5–4 mm. Hg pressure were studied. During fractionation of I the bottom temp. was maintained at ≤ 150° and of II at ≤ 200°. Specific rotation of fractions of I obtained at 150° increased from +0.08 to +0.20° (fraction bps 256–90°). The specific rotation of the subsequent fractions dropped sharply and changed the sign, becoming −0.26° for the fraction bps 338–355°. For II, the first fractions, bps below 200°, were optically inactive, but the specific rotation increased regularly for the next fractions until it reached 0.25° for the fraction bps 270–85°.

Optical activity in the transformation of limonene under the influence of active clays. I. S. Sattar-Zade. *Doklady Akad. Nauk Azerbaidzhan. S.S.R.* 9, No. 6, 279–82(1953); *Referat. Zhur., Khim.* 1954, No. 18097.—The change of optical activity of limonene ([α] 106.5°) and its 5% solns. in PhMe and xylene ([α] 5.36°) upon heating over natural active clay was studied. The optical activity of limonene was practically constant from 25–50°. At 100° the angle of rotation decreased to 1.25° and at 125° to 0.46°. At 150° there was complete racemization. The drop in the angle of rotation is practically independent of the time of contact but is related to the amt. of catalyst. At 100° complete racemization was achieved when the quantity of clay exceeded 78% of treated substance. It is suggested that the appearance of optically active substances in petroleum fractions can be attributed to the decompn. of terpenes and sterols derived from remnants of vegetable and animal origin, the decompn. having taken place under the influence of natural active clays. M. Hoseh

Transformations of organic compounds caused by aluminosilicate catalysts. VIII. Change in the optical activity of limonene. I. S. Sattar-Zade. *Izvest. Akad. Nauk Azerbaidzhan. S.S.R.* 1954, No. 6, 85–91 (in Russian); cf. *C.A.* 49, 14085e.—Catalytic effects of natural aluminosilicate catalyst (75.2 SiO_2, 12.1 Al_2O_3, 0.4 Fe_2O_3, 1.2 CaO, 1.7 MgO, 2.2 Na_2O and K_2O, and 8.0% H_2O) on limonene were studied at 25–150°. Decrease in the optical activity of the compd., was mainly due to the effect of temp. and was practically independent of the contact time. After a gradual decrease in rotation with an increase in the temp., complete racemization occurred at 150°. Products of decompn. of limonene contained isomers of menthane. It is thought that similar reactions may account for the presence of optically active substances in petroleum. 15 references. A. P. Kotlobay

TITLE: Catalytic transformation of petrolatum over gumbrin

PERIODICAL: Referativnyy zhurnal. Khimiya, no: 17, 1962, 474, abstract 17M171 (Azerb. neft. kh-vo, no. 12, 1961, 41 - 43)

TEXT: The thermocatalytic decomposition of petrolatum (temperature of solidification 56.9°C, n^{20}_D 1.4565, d^{20}_4 0.8551, mol.wt. 643, acid number 0.0) in the presence of unactivated or activated gumbrin has been investigated, using a ratio of the petrolatum to this catalyst of 2:1 at a temperature of 350°C and at atmospheric pressure. The experiments were performed in a three-necked flask connected to a condenser coil, with continuous agitation, and lasted 6 - 12 h. It was proved that the petrolatum is transformed almost identically whether an unactivated or an activated catalyst is used, the products being 51 - 53% of liquid and 26 - 31% of solid hydrocarbons respectively. Investigation of the group chemical composition of the fractions obtained showed that they are of

TOPIC TAGS: menthol, cholesterine, camphor, abietic acid, optical activity, polar solvent, nonpolar solvent, dielectric constant, refractive index

TRANSLATION: Experimental data are reported on the dependence of the optical activity of menthol, cholesterine, camphor, and abietic acid on the refractive index or the dielectric constant of solvents of the polar and apolar series. It is shown that the functions $[M]_p/(\epsilon + 2)$ and $[M]_n/(n^2 + 2)$ of the investigated substance depend on the functions $(\epsilon - 1)/(\epsilon + 2)$ and $(n^2 - 1)/(n^2 + 2)$ of the solvent (n -- refractive index, ϵ -- dielectric constant of the solvent), and the slope of the straight lines is different for polar and nonpolar solvents. O. Sverdlova.

Budapest. Pathologie und chirurgische Behandlung der Oligophrenie. (Sympathektomie des Gehirns) Pathology and surgical treatment of oligophrenia (cerebral sympathectomy) KINDERARZTL. PRAXIS 1952, 20/1(8-14)

Endogenous and exogenous (mechanical and toxic) injuries which may be suffered by the brain of the newborn lead to vascular lesions, as a result of which the developing brain is damaged by disturbances in CSF and gaseous metabolism. In view of the bad prognosis, it is considered that 'cerebral sympathectomy' is indicated. In accordance with the encephalographic findings, an area of the size of the palm of the hand is exposed at one side or the other of the cerebrum. Small glia cysts are opened and the blood vessels freed from constricting tissue. In this way normal circulatory conditions are established and the surface of the brain is freed from the pathological pia. No results of this procedure are reported. The bold statement is made that all the abnormalities known under the generic name of oligophrenia are acquired and not inherited.

45. **The development of the Hungarian chemical industry and the task of Hungarian chemists in fulfilling the Five Year Plan**, by T. Sattler. ("Magyar Kémikusok Lapja" Journal of the Hungarian Chemical Society Vol. V, No. 8, pp 248–252, Aug., 1950).

The Five Year Plan sets for the Hungarian chemical industry the task to utilize and exploit domestic raw materials to the greatest possible extent and to create a large-scale domestic chemical industry based on the most modern methods. The following are among some of the special concrete tasks facing the chemical industry: for mining, new methods for binding quicksand the manufacture of new and more powerful explosives; for metallurgy, the utilization of spent pyrite and red mud; for the building industry, new hydraulic binding agents, for the machine industry, adequate lubricants, anti-corrosion paints and plastics suitable for replacing metals, for agriculture, new fertilizers and potent insecticides, for the textile and leather industries, new dyes etc. The reorganization, modernization and the furnishing of the existing plant with suitable equipment must not be neglected while effectuating the new tasks. Beside the professional training of the chemists, their further political and ideological education must be duly ensured.

TITLE: A method for producing carbon fibers. Class 29, No. 168848

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 5, 1965, 62

TOPIC TAGS: carbon, fiber, heat treatment, hydrocarbon

ABSTRACT: This Author Certificate presents a method for producing carbon fibers by means of electrical roasting or of cracking carbon-bearing materials at high temperatures. To expand the raw-material base and to reduce cost, various carbon-bearing [illegible] are used. They must be plastic and have the required [illegible] they must [illegible] heat treatment. Such materials are pitch, tar, asphalt, [illegible] materials are added to these carbon-bearing raw materials, generally [illegible] asphalt, phenol, and aniline. To avoid sticking or sintering of the carbon fibers, the fibers are subjected to heat or heat and chemical treatment in the suspended state, or they are mixed with mineral fibers, sprinkled with coal dust, and subjected to "precarbonization" with oxidation during slow warming. Hardening is also achieved by chlorine treatment.

Akademiya nauk SSSR. Laboratoriya aerometodov

Trudy, tom 8: Materialy VII Vesesoyuznogo soveshchaniya po aerofotos"yemke 25 noyabrya - 1 dekabrya 1956 g. (Materials of the 7th All-Union Interdepartmental Conference on Aerial Surveying, 25 November-1 December 1956) Moscow, Geodezizdat, 1959. 300 p. 5,000 copies printed.

Ed. of Publishing House: Y. G. Filatov; Tech. Ed.: O. A. Gurova; Editorial Commission: E. G. Kalinin (Resp. Ed.), Corresponding Member, Academy of Sciences USSR; A. A. Logachev, V. P. Mirokhitchenko (Resp. Ed.), and E. E. Rekhler.

PURPOSE: This publication is intended for photogrammetrists, geologists, geographers, and other scientific and technical personnel concerned with aerial photography.

COVERAGE: This issue of the Transactions of the Laboratory of Aerial Survey Methods contains the second part of materials presented at the 7th All-Union Interdepartmental Conference on Aerial Surveying which took place in Leningrad, November 25 through December 1, 1956. Articles treat problems dealing with the execution and application of aerial survey methods in geological, geomorphological, and geophysical investigations. Special attention is directed to aerial survey methods in geological and geomorphological mapping and geophysical work under different conditions. The techniques of joint airborne magnetic prospecting and aerial photography are described. References accompany individual articles.

TITLE: Congress of Mining Scientists in Leipzig (Kongress uchenykh-gornyakov v Leyptsige)

PERIODICAL: Vestnik Akademii nauk SSSR, 1959, Nr 4, pp 97-100 (USSR)

ABSTRACT: The International Congress on Orogenic Compression took place from October 14th until October 16th, 1958 and had been convened by the German Academy of Sciences and the Mining Academy of Freiberg. The Congress was attended by 250 delegates from the German Democratic Republic, Austria, Britain, Belgium, Hungary, Holland, Poland, the USSR, France, the German Federal Republic, Czechoslovakia, Sweden, Yugoslavia, the Union of South Africa and Japan. The Congress mainly dealt with problems of the investigation of the mechanical and elastic and plastic properties of rock and the effect exercised by orogenic compression upon the methods of exploitation. A.Satustowicz (Poland) reported on "New Views Regarding the Stressed State and the Deformation of the Rock Surrounding the Places of Exploitation". R. Kvapil (Czechoslovakia) emphasized the necessity of finding the causes of orogenic compression. A. D. Panov and

K. V. Ruppeneyt (USSR) reported on problems of analytic determination of pressure upon the densification and simulation of the shift of rock. S. G. Avershin (USSR) stated that the application of mathematical models of an elastic and elastic-plastic medium cannot lead to an important result without taking into account the properties of compactness of the rock in the massif. V. I. Baranovskiy and A. P. Sudoplatov spoke about the effect exercised by orogenic compression upon the stability of preparation work in the suitable strata of the Donets coal basin. M. M. Protod'yakonov dealt with the simplified methods of rapid determination of the compactness of rock in the USSR. I. A. Turchaninov reported on investigations of the orogenic compression in the case of subterranean gasification of coal. G. N. Kuznetsov (USSR) spoke about the method of simulation with equivalent materials. The next Congress on Orogenic Compression will be held in 1960.

TITLE: Economic Evaluation of the Electric Smelting of Lead Ores under Altay Conditions (Ekonomicheskaya otsenka elektroplavki svintsovogo syr'ya v usloviyakh rudnogo Altaya)

PERIODICAL: Tsvetnyye Metally, 1958, 31 Nr 9, pp 24-28 (USSR)

ABSTRACT: The economic section of the Altayskiy gorno-metallurgicheskiy institut AN Kaz SSR (Altay Mining-metallurgical Institute of the AS Kaz SSR) have compared the economics of electric and shaft smelting of lead sinter in Altay. For the comparison two works each with an annual output of 50,000 tons of crude lead were taken, one having three 4500 kVA electric furnaces and the other with three shaft furnaces with cross-sectional areas at the tuyere level of 3.6 m^2. For the shaft-furnace plant the 1956-1957 operating data of the Leninogorsk lead works were used; data obtained in 1956 from a trial on an experimental 3500 kVA furnace at the same works and in 1955 on a 250 kVA furnace being used for the electric smelting of fluxed and non-fluxed sinter, respectively. The metal

Economic Evaluation of the Electric Smelting of Lead Ores under Altay conditions SOV/136-58-9-4/21

recoveries from slags and the treatment costs were taken from experience at the Ust'-Kamenogorskiy lead-zinc combine for 1956. The authors conclude that with electricity at 10 kopeyki/kWH the capital and production costs for shaft and electric smelting of fluxed sinter are the same, but for non-fluxed sinter the electrical process is cheaper. They maintain that the cost of converting existing works to electric smelting would be relatively small, e.g. 25 million roubles for the Leninogorskiy lead works, and urge the reconstruction of an industrial scale experimental plant for obtaining further information. The authors draw fairly detailed conclusions for Altay conditions but warn that these are tentative. There is 1 table.

Khimiya sera-organicheskikh soyedineniy, soderzhashchikhsya v neftyakh i neftepродуктakh; materialy II nauchnogo soveshchaniya (Chemistry of Sulfur-Organic Compounds Contained in Petroleum Products; Papers of the 2nd Scientific Session) v. 1. Ufa, Izd. Bashkirskogo filiala AN SSSR, 1958. 288 p. 1,500 copies printed.

Ed.: Sudarikov, K.I.; Editorial Board: Ayvazov, B.B., Moshkin, A.V., Obolentsev, R.D. (Resp. Ed.), Rozhdestvenskiy, V.P., and Shamin, I.I.; Tech. Ed.: Bakhirov, R. Kh.

PURPOSE: This book is intended for petroleum specialists of scientific research establishments, educational institutions, and petroleum refining plants.

COVERAGE: This collection is the first of a multivolume publication on the results of scientific research work carried out in the Soviet Union on the chemistry and technology of sulfur- and nitrogen-organic compounds during the period 1956-1957; and according to a coordinated research project outlined in 1956 by the sponsoring agency (Bashkir Branch, AS USSR).

Salimov, A.B., M.V. Lobyrev, I.N. Kozhina, A.Ye.Al'tshuler, A.N. Gutman, and V.M. Satyugov. Hydrogen Purification of Distilled Fractions of Eastern Petroleum Without the Introduction of Hydrogen From Without 135

A process of "automatic hydrogen purification" (avtogidroochistka) is described which consists in the use of hydrogen separated during the dehydrogenation of naphthene hydrocarbons, as proposed by F.W.B. Porter (Refs 1, 2). Desulfurization of kerosene distillates with initial sulfur content up to 0.8 percent was 90-95 percent after boiling at temperatures ranging from 140 to 300°C for 1000 hours; whereas, desulfurization of gas oil fractions of ~1 percent sulfur content was 60-80 percent after 200 hours at 320-350°C.
